

한글놀이 Screen Refresh

Six directions, newest first. Drawn at 1080 × 1920, the Canvas Scaler reference resolution.

Unified · pages 2-4 updated

Original title colours, plus the game screen toned to match. Mascot now at its real 900 × 660, with a marked stage for animation.

Ivory · pages 5-7

Familiar's style with white panels and orange buttons.

Wordmark weights · page 8

한글놀이 at 900 / 700 / 500 / 400 / 300, same size, to pick from.

Familiar · pages 9-11

Your current style with only the objective defects fixed.

Gold · pages 12-14

Gold buttons, warm grey panels, no gear on the title.

Canopy · pages 15-17

Deep forest panels, cream text, one amber action colour.

Meadow · pages 18-20

A pale wash over the jungle, white and sage panels.

Page 21 is the Canopy token sheet, in landscape.

Dashed boxes mark screenshot slots and the mascot stage.

How to Play

Playing a round

- 1 Tap a jamo tile from the tray. It flies to the slot it belongs in — **consonants** to the consonant slots, **vowels** to the vowel slot.

screenshot slot — 864 × 264

- 2 Once the block looks right, tap **Confirm** to send the finished syllable up to the word bar.
- 3 Keep building syllables until you've spelled a whole word.

Settings

Sound

Tile taps, word chimes and the timer

Confirm each syllable

Off sends a finished block up automatically

Game Mode

Classic

A clue and exactly the tiles you need

Word Hunt

A random tray, no clue — find anything valid

Zen

No timer, no score — collect words in a journal

Wordmark weights

Noto Sans KR — the font already in your project. Ivory uses 500. Pick one and I'll set it everywhere.

한글놀이

900 Black — what the earlier mockups used. Strokes nearly close the counters at display size.

한글놀이

700 Bold — still heavy, but the $\equiv$ and $\circ$ start to breathe.

한글놀이

500 Medium — Ivory's choice. Clean strokes, open counters, still solid enough to hold over the jungle.

한글놀이

400 Regular — sharpest of all, but starts to look like body text rather than a logo.

한글놀이

300 Light, tracked out — elegant, but too thin to survive the busy canopy behind it.

Weight is the lever here, not size. Below 400 the wordmark loses against the background; at 900 the Hangul counters fill in and it reads as a blob at a glance.
